

forming a third semiconductor film containing one conductive type impurity element over the second semiconductor film;

reducing a concentration of the metal element in the first crystalline semiconductor film by allowing the third semiconductor film to getter the metal element; and

removing the second semiconductor film and the third semiconductor film.

213. A method of manufacturing a semiconductor device according to claim 212, wherein the third semiconductor film is formed by forming a semiconductor film and by adding one conductive type impurity element to the semiconductor film.

214. A method of manufacturing a semiconductor device according to claim 212, wherein the third semiconductor film containing the one conductive type impurity element is formed by one selected from the group consisting of a plasma CVD method and a low pressure thermal CVD method.

215. A method of manufacturing a semiconductor device according to claim 212, wherein the third semiconductor film containing the one conductive type impurity element is formed by sputtering technique.

216. A method of manufacturing a semiconductor device according to claim 215, further comprising a step of adding at least one element selected from the group consisting of He, Ne, Ar, Kr, Xe, O, O₂, H, and H₂ to the third semiconductor film containing the one conductive type impurity element.

217. A method of manufacturing a semiconductor device according to claim 212, wherein the third semiconductor film has an amorphous structure or a crystalline structure.

218. A method of manufacturing a semiconductor device according to claim 212, wherein the metal element is at least one element selected from the group consisting of Fe, Ni, Co, Ru, Rh, Pd, Os, Ir, Pt, Cu, and Au.

219. A method of manufacturing a semiconductor device according to claim 212, wherein the crystallizing step is carried out by a heat treatment.

220. A method of manufacturing a semiconductor device according to claim 212, wherein the crystallizing step is carried out by irradiating the first semiconductor film with a light.

221. A method of manufacturing a semiconductor device according to claim 212, wherein the crystallizing step is carried out by a heat treatment and by irradiating the first semiconductor film with a light after the heat treatment.

222. A method of manufacturing a semiconductor device according to claim 212, wherein the reducing step is carried out by a heat treatment.

223. A method of manufacturing a semiconductor device according to claim 212, wherein the reducing step is carried out by irradiating the first crystalline semiconductor film with a light.

224. A method of manufacturing a semiconductor device according to claim 212, wherein the reducing step is carried out by a heat treatment and by irradiating the first crystalline semiconductor film with a light after the heat treatment.

225. A method of manufacturing a semiconductor device according to claim 212, wherein the one conductive type impurity element is one selected from the group consisting of elements belonging to Group 15 or 13 in the periodic table.

226. A method of manufacturing a semiconductor device according to claim 223, wherein the light is emitted from one selected from the group consisting of a halogen lamp, a metal halide lamp, a xenon arc lamp, a carbon arc lamp, a high pressure sodium lamp, and a high pressure mercury lamp.

227. A method of manufacturing a semiconductor device according to claim 212, wherein the semiconductor device is an EL display device.

 228. A method of manufacturing a semiconductor device according to claim 212, wherein the semiconductor device is at least one selected from the group consisting of a personal computer, a video camera, a mobile computer, a goggle-type display, a player using a recording medium, a digital camera, a projector, a mobile phone, and a portable book.

229. A method of manufacturing a semiconductor device comprising the steps of:

forming a first semiconductor film comprising amorphous silicon over a substrate;

adding a crystallization promoting material on the first semiconductor film;

crystallizing the first semiconductor film to form a first crystalline semiconductor film;

forming a second semiconductor film over the first crystalline semiconductor film;

forming a third semiconductor film containing one conductive type impurity element over the second semiconductor film;

reducing a concentration of the crystallization promoting material in the first crystalline semiconductor film by using the third semiconductor film; and

removing the second and the third semiconductor films after the reducing step.

230. A method of manufacturing a semiconductor device according to claim 229, wherein the third semiconductor film is formed by forming a semiconductor film and by adding one conductive type impurity element to the semiconductor film.

231. A method of manufacturing a semiconductor device according to claim 229, wherein the third semiconductor film containing the one conductive type impurity element is formed by one selected from the group consisting of a plasma CVD method and a low pressure thermal CVD method.

 232. A method of manufacturing a semiconductor device according to claim 229, wherein the third semiconductor film containing the one conductive type impurity element is formed by sputtering technique.

233. A method of manufacturing a semiconductor device according to claim 232, further comprising a step of adding at least one element selected from the group consisting of He, Ne, Ar, Kr, Xe, O, O₂, H, and H₂ to the third semiconductor film containing the one conductive type impurity element.

234. A method of manufacturing a semiconductor device according to claim 229, wherein the third semiconductor film has an amorphous structure or a crystalline structure.

235. A method of manufacturing a semiconductor device according to claim 229, wherein the crystallization promoting material is at least one element selected from the group consisting of Fe, Ni, Co, Ru, Rh, Pd, Os, Ir, Pt, Cu, and Au.

236. A method of manufacturing a semiconductor device according to claim 229, wherein the crystallizing step is carried out by a heat treatment.

237. A method of manufacturing a semiconductor device according to claim 229, wherein the crystallizing step is carried out by irradiating the first semiconductor film with a light.

238. A method of manufacturing a semiconductor device according to claim 229, wherein the crystallizing step is carried out by a heat treatment and by irradiating the first semiconductor film with a light after the heat treatment.

B¹
239. A method of manufacturing a semiconductor device according to claim 229, wherein the reducing step is carried out by a heat treatment.

240. A method of manufacturing a semiconductor device according to claim 229, wherein the reducing step is carried out by irradiating the first crystalline semiconductor film with a light.

241. A method of manufacturing a semiconductor device according to claim 229, wherein the reducing step is carried out by a heat treatment and by irradiating the first crystalline semiconductor film with a light after the heat treatment.

242. A method of manufacturing a semiconductor device according to claim 229, wherein the one conductive type impurity element is one selected from the group consisting of elements belonging to Group 15 or 13 in the periodic table.

243. A method of manufacturing a semiconductor device according to claim 240, wherein the light is emitted from one selected from the group consisting of a halogen lamp, a metal halide lamp, a xenon arc lamp, a carbon arc lamp, a high pressure sodium lamp, and a high pressure mercury lamp.

244. A method of manufacturing a semiconductor device according to claim 229, wherein the semiconductor device is an EL display device.

245. A method of manufacturing a semiconductor device according to claim 229, wherein the semiconductor device is at least one selected from the group consisting of a personal computer, a video camera, a mobile computer, a goggle-type display, a player using a recording medium, a digital camera, a projector, a mobile phone, and a portable book.

246. A method of manufacturing a semiconductor device comprising the steps of:

 forming a first semiconductor film comprising amorphous silicon over a substrate;

adding a crystallization promoting material on the first semiconductor film;
crystallizing the first semiconductor film to form a first crystalline semiconductor film;

forming a second semiconductor film over the first crystalline semiconductor film;

forming a third semiconductor film containing one conductive type impurity element over the second semiconductor film;

reducing a concentration of the crystallization promoting material in the first crystalline semiconductor film by gettering the crystallization promoting material into the third semiconductor film; and

removing the second and the third semiconductor films after the reducing step.

247. A method of manufacturing a semiconductor device according to claim 246, wherein the third semiconductor film is formed by forming a semiconductor film and by adding one conductive type impurity element to the semiconductor film.

248. A method of manufacturing a semiconductor device according to claim 246, wherein the third semiconductor film containing the one conductive type impurity element is formed by one selected from the group consisting of a plasma CVD method and a low pressure thermal CVD method.

249. A method of manufacturing a semiconductor device according to claim 246, wherein the third semiconductor film containing the one conductive type impurity element is formed by sputtering technique.

250. A method of manufacturing a semiconductor device according to claim 249, further comprising a step of adding at least one element selected from the group consisting of He, Ne, Ar, Kr, Xe, O, O₂, H, and H₂ to the third semiconductor film containing the one conductive type impurity element.

B¹
251. A method of manufacturing a semiconductor device according to claim 246, wherein the third semiconductor film has an amorphous structure or a crystalline structure.

252. A method of manufacturing a semiconductor device according to claim 246, wherein the crystallization promoting material is at least one element selected from the group consisting of Fe, Ni, Co, Ru, Rh, Pd, Os, Ir, Pt, Cu, and Au.

253. A method of manufacturing a semiconductor device according to claim 246, wherein the crystallizing step is carried out by a heat treatment.

254. A method of manufacturing a semiconductor device according to claim 246, wherein the crystallizing step is carried out by irradiating the first semiconductor film with a light.

255. A method of manufacturing a semiconductor device according to claim 246, wherein the crystallizing step is carried out by a heat treatment and by irradiating the first semiconductor film with a light after the heat treatment.

256. A method of manufacturing a semiconductor device according to claim 246, wherein the reducing step is carried out by a heat treatment.

257. A method of manufacturing a semiconductor device according to claim 246, wherein the reducing step is carried out by irradiating the first crystalline semiconductor film with a light.

258. A method of manufacturing a semiconductor device according to claim 246, wherein the reducing step is carried out by a heat treatment and by irradiating the first crystalline semiconductor film with a light after the heat treatment.

P1*
259. A method of manufacturing a semiconductor device according to claim 246, wherein the one conductive type impurity element is one selected from the group consisting of elements belonging to Group 15 or 13 in the periodic table.

260. A method of manufacturing a semiconductor device according to claim 257, wherein the light is emitted from one selected from the group consisting of a halogen lamp, a metal halide lamp, a xenon arc lamp, a carbon arc lamp, a high pressure sodium lamp, and a high pressure mercury lamp.

261. A method of manufacturing a semiconductor device according to claim 246, wherein the semiconductor device is an EL display device.

262. A method of manufacturing a semiconductor device according to claim 246, wherein the semiconductor device is at least one selected from the group consisting of a personal computer, a video camera, a mobile computer, a goggle-type display, a player using a recording medium, a digital camera, a projector, a mobile phone, and a portable book.--
